Characteristics:

Production Area

- > The area, close to the Venetian Prealps, has a temperate climate with mild winters and fresh summers. The wide temperature range stimulates an increased production of aromatic compounds, which result in finer and more intense aromas.
- > The diversity of soils, sun exposure, slopes make this Prosecco a very complex wine.

Production Process

- > The grapes are harvested and brought quickly to the cellar to preserve their quality and avoid alterations that could be caused by:
 - > early oxidation;
 - > microbial contamination;
 - > sun exposure.
- > The grapes are softly pressed and the obtained must is stored at low temperature to preserve its freshness.
- > The fermentation is made partially starting from must. The entire process lasts about 40 days at a controlled temperature of 14-15 °C with the addition of selected yeasts.
- > Following fermentation, the wine is left in contact with the lees: the dead yeast cells release some important compounds which enhance the body, the structure and the aroma of the wine.
